

Press release EasyPos Unplugged

EasyPos - Background

EasyPos provides a user-friendly web based cash register, which is easy and inexpensive to install, providing a simple solution for advanced features and integration with other systems. In addition to handling cash payments, EasyPos also has an integrated payment card solution, which is ready for the PCI and EMV standards.

EasyPos products are marketed and sold by EasyPos AB. The products are developed by Infrasec Sweden AB, and are enabled using their iSecure Platform. EasyPos differs from other solutions on five main points:

- 1. Requires no initial investment.*
- 2. Does not require a long-term contract.*
- 3. Requires no local installation.*
- 4. Requires no local service.*
- 5. Handles EMV approved credit cards with chip and PIN, relieving businesses of responsibility for card frauds.*

The register requires an Internet connection, and everything is configured and set-up on a central server, which means that no local installation is required and no manual software updates are necessary.

EasyPos Unplugged for iPad

We are proud to present the cutting edge of POS systems with our new EasyPos Unplugged for iPad! This revolutionary solution prints receipts directly on a Wi-Fi enabled Epson printer, and even has an integrated payment card solution! Having a central POS solution enables you to start a purchase on your normal POS, then move over to the iPad and continue where you left off to add additional products while walking around in your store. You can then finish the transaction directly on the iPad, or move the purchase session back to your normal POS.

We make it work!
